# PETITION TO MAKE SPECIAL UNDER 37 C.F.R. S 1.102 And M.P.E.P. Section 708.02 (XI)

COMMISSIONER FOR PATENTS Mail Stop PETITION P.O. Box 1450 Alexandria, VA 22313-1450 Washington, D.C. 20231

May 27, 2004 Transmitted via Facsimile

#### Commissioner:

Applicant respectfully petitions that the above referenced Patent Application be made special under the provisions of 37 C.F.R. § 1.102 and be advanced out of turn for examination on the grounds that the invention contributes to countering terrorism, as defined in the Manual of Patent Examining Procedure ("M.P.E.P.") at section 708.02 (XI).

Transmitted by facsimile with this Petition is a U.S.P.T.O. "Credit Card Payment Form" authorizing payment of the required Petition Fee of \$130.00 under 37 C.R.R. § 1,17(h).

The claimed invention of the above-referenced Patent Application has been specifically designed to facilitate screening of potential terrorists at high security events, such as visits of

05/28/2004 CNGUYEN 00000069 10822917

-1-

130.00 OP

MAY 2 7 2004

heads of state, etc. Additionally, the claimed "transportable security portal" includes elements capable of containing hazardous materials that may be discharged by a suicide bomber detected within the portal. The claimed invention is also specifically crafted to support screening of high security areas that may experience a sudden higher security risk due to special events, or due to identified or suspected terrorist activities related to a particular event, such as very popular sport's events (e.g, the "Super Bowl", "Olympics", etc.) and regional airports associated with such events. Therefore, the claimed invention is especially appropriate for assisting in countering terrorism of the heinous sort unleashed on the United States on September 11, 2001.

In particular, the claimed invention of the above referenced application includes a security portal or enclosure that is dimensioned to be readily mounted and transported on a trailer alone as a single security portal or with a plurality of security portals to provide screening for a short term, high security event. The portal includes bullet-resistant, bomb-blast proof and at least partially transparent walls and doors. Monitors are secured to the portal for monitoring an individual within an interior of the portal for detecting weapons, bio-hazards, chemical toxins, illegal drugs, contraband, or other hazardous materials. The security portal also includes a security monitoring station adjacent the security access door and a bomb-blast enclosure having a flap and bomb-blast containment balloon for containing hazardous materials in the event of a bomb-blast within the portal.

It is also pointed out that the inventor of the claimed invention of the above referenced Patent Application, Gerald D. Stomski, invented and previously patented an airport security screening system entitled "Automated Security Chambers for Queues" subject to U.S. Patent No. 6,484,650 that issued on November 26, 2002. During prosecution of Mr. Stomski's Application that resulted in the `650 Patent, the Application (Serial No.

FROM : Atty Chrsholm

09/683,272) was made special upon petition because of its ability to assist in countering terrorism. The claimed invention of the present Application is in many ways a significant improvement upon and further development of components of the invention of the issued 650 Patent, and will provide greater counter terrorism support for a larger number of high security risk sites.

Accordingly, the Applicant respectfully requests that this Petition be granted on the merits of the Application and on the above statement disclosing how the invention contributes to countering terrorism, pursuant to M.P.E.P. § 708.02 (XI).

Respectfully submitted, Malcolm J. Chisholm, Jr.

CONFIDENTIAL

Published: 2-Oct-2003 Priority: 1-001-2001 Abstract: A method of buying a service or a product using a telephone apparatus, in which method the service operator has the equipment to identify the customer, who sends a message with a telephone apparatus to the service operator in order to place an order for a service. The method includes a contract between customer and service operator, whereby, when the customer calls the service operator from a contracted telephone number the service order will be accepted, when the service operator identifies the caller number to be in accordance with the contract, whereby the service operator switches on the service wanted and directs the charge of transaction to the identified customer. top-ot page 🚹 US 20030187756 Electronic realty and transaction system and method therein Applicant: Klivington, Eva; Klivington, Margit Class: G06F 017/60 Published: 2-Oct-2003 Priority: 27-Dec-2002 Abstract: The electronic realty transaction system (ERTS) automates real estate processes and provides web-based accessibility to residential, commercial, and land markets. The system will provide a "one-stop-shop" for all real estate related transactions and will include a detailed tracking and history of customer transactions for the realtors. The system will provide the ability to charge, collect, and track payments for real estate related transactions. ERTS includes an electronic contract generator (ECG) that pulls information from multiple sources and automatically identifies end-user requests for services and ultimately enables a property request (i.e. contract) to be developed using auto populating techniques. top of page 🚹 US 20030187760 Content billing method, and content
